DESCRIPTION OF EACH TEST IN PSYCHSUITE

All Psych Screen Batteries utilize well validated psychological tests to provide diagnostic and treatment planning information.

Because Psych Screen, Inc. is not a test publisher vested in selling any particular test, we are free to choose the best measure of each aspect of psychological functioning.

To meet your clinical need, our on site software allows you to customize your test battery and administer any combination of included tests at one low price. Fax in reports can also integrate multiple tests into a single report, but because of our costs from using test publisher scoring programs, a per test fee is charge that is much less than those of the respective test publishers per report price.

TESTS OF MALINGERING

Malingering Probability Scale (MPS)
To determine the likelihood that an individual is exaggerating claims of mental illness the MPS is effective in identifying malingerers by addressing real psychopathology and simulated psychopathology
For Post-Traumatic Stress, Schizophrenia, Depression, and Dissociative Disorders.
(Agent)
http://portal.wpspublish.com/portal/page?_pageid=53,103039&_dad=portal&schema=PORTAL

Miller MFAST

A brief 25-item screening that assess the probability that an individual is feigning psychiatric illness. Most psychiatric illness. The seven M-FAST scales \ response strategies that have been demonstrated to successfully identify individuals who are attempting to feign psychology:Reported vs. Observed (symptoms) (RO), Extreme Symptomatology (ES), Rare Combinations (RC), Unusual Hallucinations,
Unusual Symptom Course (USC), Negative Image (NI), and Suggestibility (ES).

Paulhaus Balanced Inventory of Desirable Responding
The Paulhus Deception Scales is a 40-item instrument that is able to identify individuals who distort their responses through Impression Management and Self-Deceptive Enhancement,

Structured Inventory of Malingered Symptomatology (SIMS)
The SIMS is a 75-item, true/false screening instrument that assesses for both malingered psychopathology and neuropsychological symptoms. The SIMS consists of five scale (malingered Psychosis, Neurological Impairment, Amnesic Disorders, Low Intelligence and Affective Disorders), as well as an overall score for probable malingering (i.e., Total score).

Behavior Rating Inventory of Executive Function (BRIEF)
The BRIEF consists of a parent questionnaire and a teacher questionnaire that to assess executive functioning in the home and school environments. Scales include 2 composite and 8 individual scales: Behavioral Regulation (Inhibit, Shift, Emotional Control) and Metacognition (Initiate, Working Memory, Plan/Organize, Organization of Materials, and Monitor).

Sensory Profile – Toddler, Child, Adolescent and Adult versions
Measures how well people process sensory information in everyday situations and profiles the sensory system's effect on functional performance.

RATINGS OF AHHD

ACTERS Rating Scale
ADDES Attention Disorders Evaluation Scale
Brown ADHD Scales
Identify the following clusters frequently associated with ADD: activating and organizing to work, sustaining attention and concentration, sustaining energy and effort, managing affective interference, utilizing working memory, and assessing recall.
(Adolescent, Adult reports)

Connors' Rating Scales-Revised (CRS-III)
In Parent, Teacher, and Self-Report forms, the Connors Rating Scales –Revised assesses a broad range of significant problem behaviors, as well as having a new empirically created index for assessing children and adolescents at risk for a diagnosis of ADHD.
(Child, Adolescent reports)

Connors' Adult ADHD Rating Scales (CAARS)
The CAARS contains both self-report and observer forms, providing a balanced, multimodal assessment of adult ADHD symptoms at home, at work, and in peer interaction.
(Adult reports)

RATINGS OF DEVELOPMENT

Conners Early Childhood
Conners Early Childhood Developmental Milestones
Conners Early Childhood Behavior
Conners Early Childhood Behavior Short Form
DP-3 Developmental Profile 3

TESTS OF AUTISM/PDD

ADI-R Autism Diagnostic Interview Revised
ADOS Autism Diagnostic Observation Schedule
ASDS Asperger's Syndrome Diagnostic Scale
Cambridge Autism Questionnaire
Gilliams Asperger’s Disorder Scale
Gilliams Autism Rating Scale
PDD Behavior Inventory (PDDBI)
Teacher and parent versions rates PDD symptoms including approach/withdrawal problems (7 scales), Ritualistic Behavior, Social communication abilities (4 scales), and an Autism composite. (Child report)

MULTIPHASIC TESTS OF PSYCHOPATHOLOGY AND PERSONALITY

Millon Clinical Multiaxial Inventory (MCMI-II/III/MACI/MPACI)
The MCMI not only evaluate Axis I Mental Health problems, more importantly, its strength is in determining underlying personality patterns that are essential to understanding and effectively treating clients.
(Child, Adolescent, Adult reports)

Minnesota Multiphasic Personality Inventory (MMPI-2)
Minnesota Multiphasic Personality Inventory (MMPI-2/MMPI-A)
The MMPI is the most commonly used psychological test and the premiere measure of psychopathology its many Content and Supplementary scales not only clarify Axis I disorders, but also provide important information on a wide variety of psychological functioning. New RC scales included in adult version.
(Adolescent, Adult reports)
http://www.pearsonassessments.com/tests/mmpia.htm
http://www.pearsonassessments.com/tests/mmpi_2.htm

Minnesota Multiphasic Personality Inventory – Adolescent (MMPI-A)
NEO Personality Inventory\-III
OMNI Inventory
Personality Assessment Inventory (PAI)
Explores 22 nonoverlapping scales covering the constructs most relevant to a broad-based assessment of mental disorders. The PAI includes 5 validity scales, 11 clinical scales, 5 treatment scales, and 2 interpersonal scales. In addition, 10 full scales contain conceptually derived subscales.
(Adult reports)

Personality Assessment Inventory – Adolescent (PAI-A)
Personality Adjective Check List (PAACL)
RATINGS OF ADULT PSYCHIATRIC STATUS

Achenbach Older Adult Checklist  
Adult Behavior Checklist (ABCL/18-59)  
Adult Self-Report (ASR/18-59)  
Behavior Assessment System for Children, Second Edition (BASC 2)  
BPRS Brief Psychiatric Rating Scale  
BPAD Biological and Psychosocial Assessment of Depression  
BSI Brief Symptom Inventory  
Cornell Scale for Depression in Dementia  
Geriatric Depression Scale  
Katz Adjustment Scale  
MDS/BIMS Resident Mood Interview  
MDS/BIMS Staff Assessment of Mood  
Neuropsychiatric Inventory  
NPI  
Older Adult Behavior Checklist (OABCL/60-90+)  
Older Adult Self-Report (OASR/60-90+)  
Personality Adjective Check List (PACL)  
The PACL is a self-report and rating measure of Theodore Millon's eight basic personality patterns for use with normal adults and counseling patients. (Adolescent, Adult reports)  
http://www.21stcenturyassessment.com/pacl.htm  
SCL-90 Symptom Checklist 90

MULTI DIMENSIONAL CHILD RATING SCALES

The Achenbach System of Empirically Based Assessment (ASEBA) offers a comprehensive approach to assessing adaptive and maladaptive functioning. (Child, Adolescent, Adult reports)  
http://www.aseba.org/products/forms.html
**Behavior Assessment System for Children, Second Edition (BASC2)**

The BASC-2 system enables assessment from three vantage points – self, teacher, and parent/caregiver – to help ensure a balanced evaluation. Scales in raters report depend on age of the child and rater and may include Activities of Daily Living, Adaptability, Aggression, Anxiety, Attention Problems, Atypicality, Conduct Problems, Depression, Functional Communication, Hyperactivity, Leadership, Learning Problems, Social Skills, Somatization, Study Skills and Withdrawal. Self-report scales include Alcohol Abuse, Anxiety, Attention Problems, Attitude to School, Attitude to Teachers, Atypicality, Depression, Hyperactivity, Interpersonal Relations, Locus of Control, Relations with Parents, School Maladjustment, Self-Esteem, Self-Reliance, Sensation Seeking, Sense of Inadequacy, Social Stress and Somatization.

(Child, Adolescent, Adult reports)

[http://www.pearsonassessments.com/tests/basc.htm](http://www.pearsonassessments.com/tests/basc.htm)

**CBRS Conners Comprehensive Behavior Rating Scale**

**Child Symptom Inventory–4 (CSI-4)**

Assesses 5- to 12-year-olds for symptoms of common childhood psychiatric disorders. The Parent Checklist covers 17 disorders, while the Teacher Checklist related to 13 disorders including ADHD, Oppositional Defiant Disorder, Conduct Disorder, Separation Anxiety, Generalized Anxiety, Social Phobia, Specific Phobia, Depression, Dysthymia, Asperger’s Syndrome, Pervasive Developmental Disorder, Schizophrenia, Obsessive-Compulsive Disorder, Posttraumatic Stress Disorder, Motor Tic Disorder and Vocal Tic Disorder.

(Child reports)

**Clinical Assessment of Behavior (CAB)**

**Early Childhood Inventory–4 (ECI-4)**

The ECI-4 screens for emotional and behavioral disorders in children from 3 to 5 years of age. A Teacher Checklist and a Parent Checklist explore symptoms related to ADHD, Oppositional Defiant Disorder, Conduct Disorder, Separation Anxiety, Generalized Anxiety, Social Phobia, Specific Phobia, Depression, Dysthymia, Asperger’s Syndrome, Pervasive Developmental Disorder, Obsessive-Compulsive Disorder, Posttraumatic Stress Disorder, Motor Tic Disorder, Vocal Tic Disorder, attachment disorder, selective mutism, and eating, sleeping, and elimination problems. In addition, a brief developmental section gives a global impression of the child’s speech and language abilities, fine and gross motor coordination, and social skills.

(Child reports)

**Personality Inventories for Children- 2 (Pic-2)**

**Short Personality Inventory for Children 2**
Clinical Assessment of Behavior (CAB)

The CAB assesses both competence-based qualities and problem-based concerns that reflect current societal issues about youth (e.g., bullying, aggression, executive function, gifted and talented). It includes both Parent and Teacher Rating Forms.

(Child, Adolescent reports)

PERSONALITY INVENTORIES FOR CHILDREN (PIC-2)

Separate rating by Father, Mother and Teacher can be integrated into one report. Domains and subscales include Cognitive Impairment (Inadequate Abilities, Poor Achievement, Developmental Delay), Family Dysfunction (Conflict Among Members, Parent Maladjustment), Psychological Discomfort (Fear and Worry, Depression, Sleeping Disturbance/Preoccupation With Death), Impulsivity and Distractibility (Disruptive Behavior, Fearlessness), Reality Distortion (Developmental Deviation, Hallucinations and Delusions), Social Withdrawal (Social Introversion, Isolation), Delinquency (Antisocial Behavior, Dyscontrol, Noncompliance), Somatic Concern (Psychosomatic Preoccupation, Muscular Tension and Anxiety), and Social Skill Deficits (Limited Peer Status, Conflict With Peers)

(Child, Adolescent reports)

Personality Inventory for Youth (PIY)

Self report for ages 10-18 measures Validity, Inconsistency, Dissimulation, Defensiveness, Cognitive Impairment, Impulsivity and Distractibility, Delinquency, Family Dysfunction, Reality Distortion, Somatic Concern, Psychological Discomfort, Social Withdrawal and Social Skills Deficits

(Child, Adolescent reports)

TESTS OF DEPRESSION

Beck Depression Inventory II
Children’s Depression Inventory 2 (CDI-2)

Test of Depressive symptoms in children that measures a Total Score plus five Factor Scores: including Negative Mood, Interpersonal Problems, Ineffectiveness, Anhedonia and Negative Self-Esteem.

(Child, Adolescent reports)

Clinical Assessment of Depression
Cornell Scale For Depression In Dementia
Geriatric Depression Scale
Hamilton Depression Scale- 17
Hamilton Depression Scale- 23
ICD-10 Depression Inventory
MDI-C Multiscore Depression Inventory for Children
Multiscore Depression Inventory
Patient Healthcare Questionnaire- 9
Short Geriatric Depression Scale

TESTS OF ANXIETY

Endler Multidimensional Anxiety Scale
Hamilton Anxiety Scale
Job Stress Scale
Occupational Stress Inventory
Leibowitz Social Anxiety Scale
Multidimensional Anxiety Questionnaire (MAQ)
The MAQ is a measure of anxiety in adults. NQ scores include a Total scale and four symptom domains: Physiological-Panic Social Phobia, Worry-Fears, and Negative Affectivity.
(Adult reports)

Multidimensional Anxiety Scale for Children (MASC)
The MASC measures anxiety responses in 5-19 year olds. Scales include Physical Symptoms, Harm Avoidance, Social Anxiety, Separation/Panic, Anxiety Disorders, Total Anxiety Index, and an Inconsistency Index.
(Child, Adolescent reports)
https://www.mhs.com/ecom/(o1dmh33f4io4g5vxprqqy4in)/product.aspx?RptGrpID=MAS

State-Trait Anxiety Inventory (STAI)/ State-Trait Anxiety Inventory for Children (STAIC)
The STAI is designed to differentiate between the temporary condition of “state anxiety” and the more general and long-standing quality of “trait anxiety” in adults. The State Anxiety scale evaluates feelings of apprehension, tension, nervousness, and worry, which increase in response to physical danger and psychological stress. The Trait Anxiety scale is ideal for screening for anxiety problems.
(Child, Adolescent, Adult reports)
State-Trait Anxiety Inventory-Child (STAI-C)  
Zung Anxiety Scale

**TESTS OF BIPOLAR DISORDER/MANIA**  
Bipolar Spectrum Diagnostic Scale  
Mood Disorder Questionnaire  
Young Mania Rating Scale

**TESTS OF PTSD**  
**Detailed Assessment of Post Traumatic Stress (DAP)**  
The DAP is a new instrument designed to measure PTSD symptoms, both during the event and afterwards, as well as to determine the degree of PTSD related impairment.  
(Adult reports)  

**Traumatic Symptom Checklist for Children (TSCC)/ Trauma Symptom Checklist for Young Children™ (TSCYC™)**  
Specifically evaluates the presence of PTSD symptoms in children. The 54-item TSCC self report includes two validity scales (Underresponse and Hyper-response) and six clinical scales (Anxiety, Depression, Anger, Posttraumatic Stress, Dissociation, and Sexual Concerns). The alternate 44-item version (TSCC-A) is identical to the TSCC, except it makes no reference to sexual issues (and has no Sexual Concerns scale). For children 3-12, the TSCYC is a 90-item caretaker-report instrument, with separate norms for males and females in three age groups: 3-4 years, 5-9 years, and 10-12 years. The TSCYC contains specific scales to ascertain the validity of caretaker reports (Response Level and Atypical Response). The TSCYC contains eight Clinical scales: Anxiety, Depression, Anger/Agression, Posttraumatic Stress-Intrusion, Posttraumatic Stress-Avoidance, Posttraumatic Stress-Arousal, Dissociation, and Sexual Concerns, as well as a summary posttraumatic stress scale (Posttraumatic Stress-Total).  
(Child, Adolescent reports)  

**TESTS OF OBSESSIVENESS**  
Children's Measurement of OCD Symptoms

**Clark-Beck Obsessive-Compulsive Inventory (CBOCI)**  
The CBOCI is a screener designed to identify obsessive and compulsive symptoms in individuals
ages 17 and older. The CBOCI includes 11 items that assess obsessive behaviors and 14 items that assess compulsive behaviors.

(Adolescent, Adult reports)

Yale Brown Obsessive Compulsive Scale

**TESTS OF ANGER**

**Aggression Questionnaire (AQ)**

The Aggression Questionnaire (AQ) measures an individual's aggressive responses and his or her ability to channel those responses in a safe, constructive manner. Subscales include Physical Aggression, Verbal Aggression, Anger, Hostility and Indirect Aggression.

(Child, Adolescent, Adult reports)

**Anger Disorder Scale (ADS)**

Comprehensive self report of anger and anger control measures Anger-in, Verbal/Expression, Vengeance, Provocations, Arousal, Cognitions, Motives, and Behaviors, as well as many individual scales.

(Adult reports)

Children's Inventory of Anger

**Domestic Violence Inventory (DVI)**

The Domestic Violence Inventory (DVI) is designed specifically for domestic violence offender assessment. The DVI evaluates violence (lethality) potential, assesses control issues, quantifies substance (alcohol and other drugs) abuse and measures stress coping abilities. The DVI has six measures (scales): Truthfulness, Violence (Lethality), Control Scale, Alcohol Scale, Drugs Scale and Stress Coping Abilities Scale.

(Adolescent, Adult reports)

http://www.bdsltd.com/bds_dvi.htm

**Domestic Violence Inventory (DVI –Youth)**

Novaco Anger Scale (NAS)
State-Trait Anger Expression Inventory-2 (STAXI-2)
The STAXI quantifies both the client's current emotional experience of anger, as well as their global disposition to experience anger over time. The STAXI investigates a variety of ways individuals cope with and control anger. Test results may directly reflect the degree of potential dangerousness and have implications for choosing optimal therapeutic interventions. (Adolescent, Adult reports)

Novaco Anger Scale (NAS)
Measures anger facets including Cognitive, Physiological Arousal, Angry Behavior and Anger Regulation. The Provocation Index reflects five content areas including disrespectful treatment, unfairness, frustration, annoying traits of others, and irritations. (Child, Adolescent, Adult reports)

State Trait Anger Expression Inventory Adolescent

TESTS OF SUBSTANCE USE
Substance Abuse Subtle Screening Inventory (SASSI-3/SASSI-A2)
SASSI tests were designed to detect addiction even in resistant clients. Based on empirical data, the SASSI not only measures reported substance use, but, more importantly, detects personality and social system characteristics that research has shown to be disproportionately present in addicted individuals including subtle characteristics that are not easily predicted and so are harder to fake. Levels of present exposure to systems that use alcohol, as well as ACOA features, are identified by the SASSI and may prove important to rehabilitative efforts. (Adolescent, Adult reports)

Level of Care Index-2R (LOCI-2R)
The LOCI-2R is a comprehensive means for guiding assessments and documenting treatment placement and planning information for the six assessment dimensions of the ASAM PPC-2R. The LOCI-2R is designed for use in the initial assessment, subsequent continued service reassessments, and transfer or discharge evaluations. All levels of care defined by the ASAM PPC-2R are covered. (Adolescent, Adult reports)
http://www.evinceassessment.com/product_loci2r.html

TESTS OF SELF IMAGE/ESTEEM
Coopersmith Self Esteem Scale
Culture Free Self Concept 3
PIERS-HARRIS CHILDREN’S SELF-CONCEPT SCALE 2 (PIERS-HARRIS 2)
Self-concept in individuals ages 7 to 18 based on the child’s own perceptions. Subscales include Physical Appearance and Attributes, Intellectual and School Status, Happiness and Satisfaction, Freedom from Anxiety, Behavioral Adjustment and Popularity. (Child, Adolescent reports)

Tennessee Self Concept Scale

TESTS OF EATING DISORDERS

Eating Disorder Inventory-3 (EDI-3)
The EDI-3 is a comprehensive measure of the presence and intensity of psychological traits or symptom clusters that are clinically relevant in assessment of individuals. The EDI-3 consists of 12 primary scales, consisting of 3 eating-disorder-specific scales and 9 general psychological scales that are highly relevant to, but not specific to, eating disorders. It also yields six composites: one that is eating-disorder specific (i.e., Eating Disorder Risk) and five that are general integrative psychological constructs (i.e., Ineffectiveness, Interpersonal Problems, Affective Problems, Overcontrol, General Psychological Maladjustment).
(Adolescent, Adult reports)

Overeating Questionnaire

TESTS OF SCHOOL BEHAVIOR

School Motivation and Learning Strategies Inventory (SMALSI)
Measures actual student learning strategies including Study Strategies, Note-Taking/Listening Skills, Reading/Comprehension Strategies, Writing/Research Skills, Test-Taking Strategies, Organizational Techniques and Time Management) and academic liabilities (Low Academic Motivation, Test Anxiety and Concentration/Attention Difficulties).

Student Behavior Survey (SBS)
(Child, Adolescent Reports)

TESTS OF COPING SKILLS

Constructive Thinking Inventory
Coping Response Inventory

TESTS OF INTERPERSONAL FUNCTIONING
FIRO-B
Interpersonal Behavior Inventory
Social Behavior Assessment Inventory

TESTS OF HEALTH FUNCTIONING

Brief Battery for Health Improvement 2 (BBHI 2)
The BBHI 2 test was developed specifically to help medical professionals assess quickly evaluate for a number of psycho medical factors commonly seen in medical patients, such as pain, somatic, and functional complaints – as well as traditional psychological concerns such as depression, anxiety and patient defensiveness including Physical Symptom Scales (Somatic Complaints, Pain Complaints, and Functional Complaints) and Affective Scales (Depression, Anxiety),
(Adult reports)
http://www.pearsonassessments.com/tests/bbhi2.htm

Chronic Pain Coping Inventory (CPCI)
Millon Behavioral Medical Diagnostic

Multidimensional Health Profile (MHP)
The MHP provides comprehensive information about psychosocial and health functioning. The MHP-Psychosocial Functioning covers life stress, coping skills, social resources, and mental health, while the MHP-Health Functioning (MHP-H) booklet provides information on response to illness, health habits, adult health history, health care utilization, and health beliefs and attitudes
(Adult reports)

Multidimensional Health Questionnaire (MHQ)

Pain Patient Profile (P3)
The Pain Patient Profile (P-3) assessment focuses on the factors most frequently associated with chronic pain. Normed using both pain patients and subjects from the community assures that P-3 test results are relevant to pain patients. Scales include Depression, Anxiety, Somatization, and a Validity Index
(Adult reports)
http://www.pearsonassessments.com/tests/p3.htm

Pittsburgh Sleep Quality Index
Survey of Pain Attitudes (SOPA)
TESTS OF QUALITY OF LIFE

Quality of Life Scale

TEST OF RISK/NEEDS

Assessing Risk for Violence (Version 2) (HCR-20)
The HCR-20 is a 20-item checklist to assess the risk for future violent behavior in criminal and psychiatric populations. Items were chosen based on a comprehensive review of the literature and input from experienced forensic clinicians. The 20 Items Are Divided Into Three Sections: 10 Historical Items (previous violence, age at first violent offense, family and vocational background, etc.), Five Clinical Items (current symptomatology and psychosocial adjustment), and Five Risk Management Items (release and treatment plan, necessary services and support).

(Adult reports)

Child Abuse Potential Inventory

The Level of Services Inventory (LSI-R, LS/CMI, and YLSI)
The LSI was developed to assist in determining security classifications. LSI subscale analysis helps pinpoint specific areas of potential Risk.
(Adolescent, Adult reports)

MnSost-R Predication of Sexual Aggression

Problem Oriented Screening Instrument for Teenagers (POSIT)
The POSIT was developed by the NIADA to serve as an initial screen to determine areas of potential Risk. A self report, it helps evaluate potential for risk behaviors in 10 areas including Substance Use, Physical Health, Mental Health, Family Relationships, Peer Relationships, Education, Vocation, Social Skills, Leisure Skills and Aggression.
(Child, Adolescent, Adult reports)

RRASOR Actuarial Risk of Sexual Aggression
Sexual Violence Risk-20 (SVR-20)
STATIC-99 Actuarial Prediction of Sexual Aggression
Suicide Probability Scale

Sexual Violence Risk-20 (SVR-20)
The SVR-20 is a 20-item checklist of risk factors for sexual violence that were identified by a review of the literature on sex offenders. The 20 factors fall into three main categories: Psychosocial Adjustment, History of Sexual Offenses, and Future Plans. (Child, Adolescent, Adult reports) http://www3.parinc.com/products/product.aspx?Productid=SVR-20

TEST OF CRIMINALITY/SOCIOPATHY

Conduct Disorder Scale

Hare Psychopathy Checklist-Revised: 2nd Ed. (PCL-R)/Youth Hare

The PCL-R is a 20-item symptom-construct rating scale designed to assess psychopathic (antisocial) personality disorders in forensic populations. It measures two factors that reflect the major facets of psychopathy: the callous, selfish, remorseless use of others (Factor 1), and a chronically unstable and antisocial lifestyle (Factor 2), as well as four subfactors: Factor 1a, Interpersonal (4 items); Factor 1b, Affective (4 items); Factor 2a, Impulsive Lifestyle (5 items); and Factor 2b, Antisocial Behavior (5 items). (Child, Adolescent, Adult reports) http://www3.parinc.com/products/product.aspx?Productid=PCL-R

Jesness Inventory Revised (JI-R)

Newly re-normed and now having overall conduct and ODD scales, has been a benchmark measure of criminal characteristics and motivations. The Jesness Inventory assesses characteristics and thought patterns common to offenders, such as social immaturity, knowledge of social rules, asocial values, and levels of authority conflicts. Most importantly, the Jesness Inventory suggests the most likely motivations behind criminal behavior. (Child, Adolescent, Adult reports) http://www3.parinc.com/products/product.aspx?Productid=JESNESS

Psychopathic Personality Inventory-Revised (PPI-R)

A self-report measure of psychopathy, rather than focusing on antisocial or criminal behaviors, the PPI-R measures the continuum of psychopathic personality traits present in a range of individuals and can be used in both clinical (e.g., forensic) and nonclinical (e.g., student, community) settings. (Adult reports) http://www3.parinc.com/products/product.aspx?Productid=PPI-R

TEST OF SEXUAL BEHAVIOR/DEVIANCEN

Derogates Sexual Functioning Inventory (DSFI)

The DSFI has been used to measure normal sexual functioning for 30 years. (Adult reports) http://www.derogatis-tests.com/home.asp

Multiphasic Sex Inventory (MSI-1) Adult and Adolescent
The MSI-I has been used to evaluate deviant sexual functioning in males since 1984. Together these two tests measure both normal and abnormal sex drive, fund of sexual information, range of sexual experiences, cognitive distortions and justifications typical of sex offenders, admitted paraphilic behaviors on a wide variety of dimensions, sexual dysfunctions and motivation for treatment. The MSI Child Molestation, Rape, and Exhibitionism scales have subscales that allow further fine grain analysis of the specific nature and degree of sexual psychopathology.
(Adolescent, Adult reports)
http://www.nicholsandmolinder.com/msi.html

Thorne Sex Inventory

TESTS OF FAMILY/PARENTING

Family Environment Scale (FES)
The FES assesses ten dimensions of the social climate of all types of families (Cohesion, Expressiveness, Conflict, Personal Growth: Independence, Achievement Orientation, Intellectual-Cultural Orientation, Active-Recreational Orientation, and Moral-Religious Emphasis). The FES is used to contrast parent/child perceptions, formulate clinical case descriptions, identify important issues in family treatment, teach clinicians about the dynamics of family systems, and identify family strengths and problems.
(Child, Adolescent, Adult reports)
http://www.mindgarden.com/products/fescs.htm

Marital Stress Inventory Wife

Parenting Stress Index, 3rd Ed. (PSI)
The PSI is designed for the early identification of parenting and family characteristics that fail to promote normal development and functioning in children, children with behavioral and emotional problems, and parents who are at-risk for dysfunctional parenting. It can be used with parents of children as young as one month. The child characteristics measured in the PST include Distractibility/Hyperactivity, Adaptability, Reinforces Parent, Demandingness, Mood, and Acceptability. The PSI parent personality and situational variables component consists of Competence, Isolation, Attachment, Health, Role Restriction, Depression, and Spouse support.
(Adult reports)

Parent-Child Relationship Inventory (PCRI)
The PCRI tells you how parents view the task of parenting and how they feel about their children. Designed for use with mothers and fathers of 3- to 15-year-old children, it the PCRI measures seven dimensions: Parental Support, Satisfaction with Parenting, Involvement, Communication, Limit Setting, Autonomy, and Role Orientation.
(Adult reports)
PRQ Parenting Relationship Questionnaire

TESTS OF MENTAL STATUS

Texas Functional Living Scale
Vineland Adaptive Behavior Scale II Mother

TESTS OF INTELLIGENCE
Kaufman Adolescent and Adult Intelligence Scale
Kaufman Brief Intelligence Test-2
Peabody Picture Vocabulary Test
Slosson Intelligence Test Revised
Shipley Institute of Living Scale 2(SILS)
An IQ screen, the SILS measures vocabulary (an index of prior learning that is not easily affected by organicity), verbal abstract reasoning (a measure of present information processing that is sensitive to organic damage), and Block Design (nonverbal problem solving and construction). Because of this, the Shipley can help determine if organic brain damage exists, as well as detect possible Learning Disorders. Reasoning ability and Learning Disorders are vital for determining program needs, as well as a client's potential for benefiting from verbal interventions.
(Adolescent, Adult reports)

Test of Nonverbal Intelligence, Fourth Edition (TONI-4)

Wechsler Preschool and Primary Scale of Intelligence-III

Wechsler Adult Intelligence Scale-IV(WAIS-IV)
The premier IQ test for adolescents and adults ages 16+.
(Adolescent, Adult reports)

Wechsler Intelligence Scale for Children-IV (WISC-IV)
The premier IQ test for children ages 6-16.
(Child, Adolescent reports)

TESTS OF MEMORY
Children’s Memory Scale Core Scales
Memory for Designs
RBANS Repeated Battery of Neurological Symptoms

Wechsler Memory Scale-3 (WMS-3)
Assess adult memory abilities comprehensively and reliably.
(Child, Adolescent, Adult reports)

TESTS OF ACADEMIC ACHIEVEMENT
Peabody Individual Achievement Test 2  PIAT-2

Wechsler Individual Achievement Test-2 (WIAT-2)
Measures sight reading, phonics, reading comprehension, math operations, applied math comprehension, spelling, writing, listening comprehension and oral expression.
(Child, Adolescent, Adult reports) http://harcourtassessment.com/haiweb/Cultures/en-US/Products/Product+Detail.htm?CS_ProductID=015-8983-505&CS_Category=06GT&CS_Catalog=TPC-USCatalog

Wide Range Achievement Test – 4 (WRAT-4)
The Wide Range Achievement Test (WRAT) is a measure of the basic academic skills including reading and spelling words, reading comprehension and performing basic mathematical calculations.
(Child, Adolescent, Adult reports)

Luria Nebraska Neuropsychological Battery

Taken together, these tests provide a powerful initial assessment of an individual's strength and weakness that have direct implications for optimal treatment planning and supervision.

Test results are integrated allowing professionals to consider their client's total clinical picture, as different test findings may interact and modify one another.

Based on these results, a PSYCH SCREEN report suggest a variety of possible diagnoses and develops a customized suggested treatment plan/supervision alternatives for you to consider in light of your client's unique history and clinical presentation.

Stay current -Free upgrades when tests change or new tests are added for our per use software. Unlimited use single test software users will be charged $100 for upgrading to more recent test versions/inclusion of new scales.
